

Fixturlaser

S-Profile Pre-cut Shims & Kits

Fixturlaser develops, manufactures & markets alignment equipment, for measuring with high accuracy in the industry.

Pre-cut shims have many benefits:

- Cost
- Simple and fast to use
- Time saving
- No time is spent cutting your own shims
- Easy stock control
- Shims provide more accurate alignment
- Increases machine availability

Fixturlaser shims are made of high quality stainless steel to prevent rust when exposed to acids and alkalis. Shims are available in various sizes, with alternative thicknesses for precise correction for the alignment of all sorts of machinery.

They are completely flat, and have rounded corners to prevent cuts, and are also equipped with an excerpt and deposit 'tab' for easy positioning and removal. Fixturlaser shims with S profile are supplied in packs of 10 per size, and in complete kits. The kits come with 3 alternative sets of shims for different needs – see below:
